

Word Of MOUTH

MESSAGE FROM DR. LEE

Staying on the Cutting Edge of Oral Surgery

As an oral surgeon, I'm passionate about keeping abreast of the latest breakthroughs in my field allows me to provide patients with the most advanced surgical techniques available. One such breakthrough is the "X-Guide," a 3D navigational system for more accurate implant placement. I'm very pleased to report Capital Oral & Facial Surgery Center has just acquired its own X-Guide system. To my knowledge, we are one of only two oral surgery practices in the D.C. area to have this cutting-edge piece of technology.

Typically, implant placements are done freehand or according to the dentist's own guide plan. Even a small error in angulation can translate to longer healing times for patients and troublesome crown placement for general dentists. The X-Guide, in contrast, provides a degree of control and precision not otherwise attainable, which means a smoother implant case for all concerned.

In that same spirit of advancing the field of dentistry, I'm also happy to announce our next Dental Implant Mini Residency program. Along with implant expert, Dr. Victor Martel, we'll be teaching general dentists the ins and outs of performing implants in their own practices. After the unqualified success of our first mini residency, we're particularly excited about this next one. All attendees will learn implant treatment planning on actual patients and will be able to watch a live surgery, performed by me, on a full-arch case. You will find more information about the residency, which begins December 2, on page 3 of this newsletter.

I look forward to seeing you there.

Sincerely,
Dr. Virginia Lee

REVOLUTIONARY IMPLANT SYSTEM NOW AT CAPITAL ORAL & FACIAL

3D Implant Placement Provides Unprecedented Accuracy

In keeping with our mission to provide an unmatched standard of care in oral surgery, we are pleased to announce the acquisition of the “X-Guide” 3D implant navigational system at **Capital Oral & Facial Surgery Center**. The X-Guide employs advanced real-time navigational technology for maximum precision and control in implant placements. We are proud to be one of just two oral surgery practices in the D.C. area to use this system.

“I have a passion for keeping up with the latest technology advancements in oral surgery,” says oral surgeon, Dr. Virginia Lee, owner of Capital Oral & Facial. “The X-Guide system represents a groundbreaking advancement for the utmost accuracy in implant placement. I’m excited to provide patients and general dentists with this exceptional level of quality for their implant procedures.”

THE TROUBLE WITH FAULTY IMPLANT PLACEMENT

Inaccurate implant placement can cause problems down the road for general dentists and their patients. Here’s why: Implants need to be placed within as much bone mass as possible so that they fuse into the jaw quickly

and easily. This makes for a more firmly fixed implant and faster healing times for patients. Most dentists, however, place implants freehand or using a guide of their own making, resulting in unwitting errors in angulation. In fact, studies show freehand implant placement typically results in an angulation error of 8 percent. When the angle of the implant is off, the general dentist can encounter issues fitting the crown to the implant, or in accessing the implant itself.

USING THE X-GUIDE FOR SMOOTHER IMPLANT PROCEDURES

Dr. Lee uses the X-Guide’s implant planning software to plan all factors of the ideal implant placement, including visualization, for more aesthetic-looking implants. During surgery, Dr. Lee uses the system’s live 360-degree view of drill position and anatomy so she can confidently transfer her 3D treatment plan to the patient. In Dr. Lee’s expert hands, the X-Guide provides a level of control and accuracy in implant placement that simply isn’t otherwise achievable.

CAPITAL ORAL & SURGERY CENTER FOR YOUR IMPLANT REFERRALS

When you send patients to us for implant placement, you can be confident in their receiving the most technically advanced implant placement technology available. That means easier implant cases and happier patients.

MISSING OUT ON DENTAL IMPLANT CASES?

Grow Your Practice with Our Dental Implant Mini Residency Program

Dr. Virginia Lee

Dr. Victor Martel

DENTAL IMPLANT MINI RESIDENCY PROGRAM

Oral surgeon, Dr. Virginia Lee, and renowned implant expert, Dr. Vic Martel, are hosting a mini residency in implant technology for general dentists. This custom program is designed to:

- » Boost your confidence in working with implant cases
- » Dramatically increase the number of implant procedures you perform
- » Improve the quality and longevity of your final restorations

WHAT YOU WILL EXPERIENCE

This program consists of five one-day sessions delivered over a six-month period, starting December 2, 2016, and includes:

- ☒ Seminars on comprehensive dentistry and implant technology
- ☒ Live implant placement surgery by Dr. Lee on a full-arch case
- ☒ Treatment planning and case presentation on actual patients
- ☒ Much, much more

The first program session will be delivered in a local D.C. area hotel. The remaining four will be held at the Capital Oral & Facial Surgery Center in Downtown.

WHAT ATTENDEES ARE SAYING

Here are just a few of the comments from our last Dental Implant Mini Residency program:

"I have the confidence to present cases."—P.S., DDS

"It has provided a clinician like myself with limited experience in this arena to feel confident."—F.H., DDS

"Now I know what to look for in doing implants."—D.N., DDS

"This is the future of dentistry."—K.B., DDS

"I feel more confident and competent... as a team, implants can be done easily."—L.M., DDS

What Patients Are Saying

“DR. LEE IS THE BEST!”

“Dr. Lee is the best! I was referred to her several years ago for an extraction. The procedure was quick and painless. The staff was professional and the facility was very clean and welcoming. Dr. Lee is very professional in her practice and, let me just add, very friendly and informative. After the first visit to Capital Oral & Facial Surgery Center, I had another issue that needed attention.

Because of the professional service that I received on my first visit, I decided to go again. But this time it was a bone graft which turned out to be another great experience. I will most definitely recommend friends and family. And if there are any other oral surgery treatments that need to be done in the future, I will be there in Dr. Virginia Lee's chair.” — C.T.
